

THE BAZAAR · CROMOS DE MADRID

CEREBRO

Smart money **in every deal.**

BY TEAM 10

1

How did you approach the challenge?

Your first idea, and what changed it.

FRIDAY

Let the model play.

- one model
- duels
- recorder
- dealers lie
- injection is legal

SATURDAY

An organisation.

- rails
- council
- Cerebro
- lab
- workshop
- broker
- easter eggs
- true and false news

SUNDAY

A market of our own.

- v07 Market
- duel guard
- price rail
- card-swap flags
- scoring bugs
- bridges

WHAT CHANGED IT A prompt cannot be trusted with money.

HOW WE CAUGHT THE SIGNALS

Record

every event of the game

a scoring bug, found by recomputing

→ Replay

and recompute the score

our own duel bug, seen in the replay

→ Read

Cerebro and the watchers

the dealer-to-team bridge

→ Decide

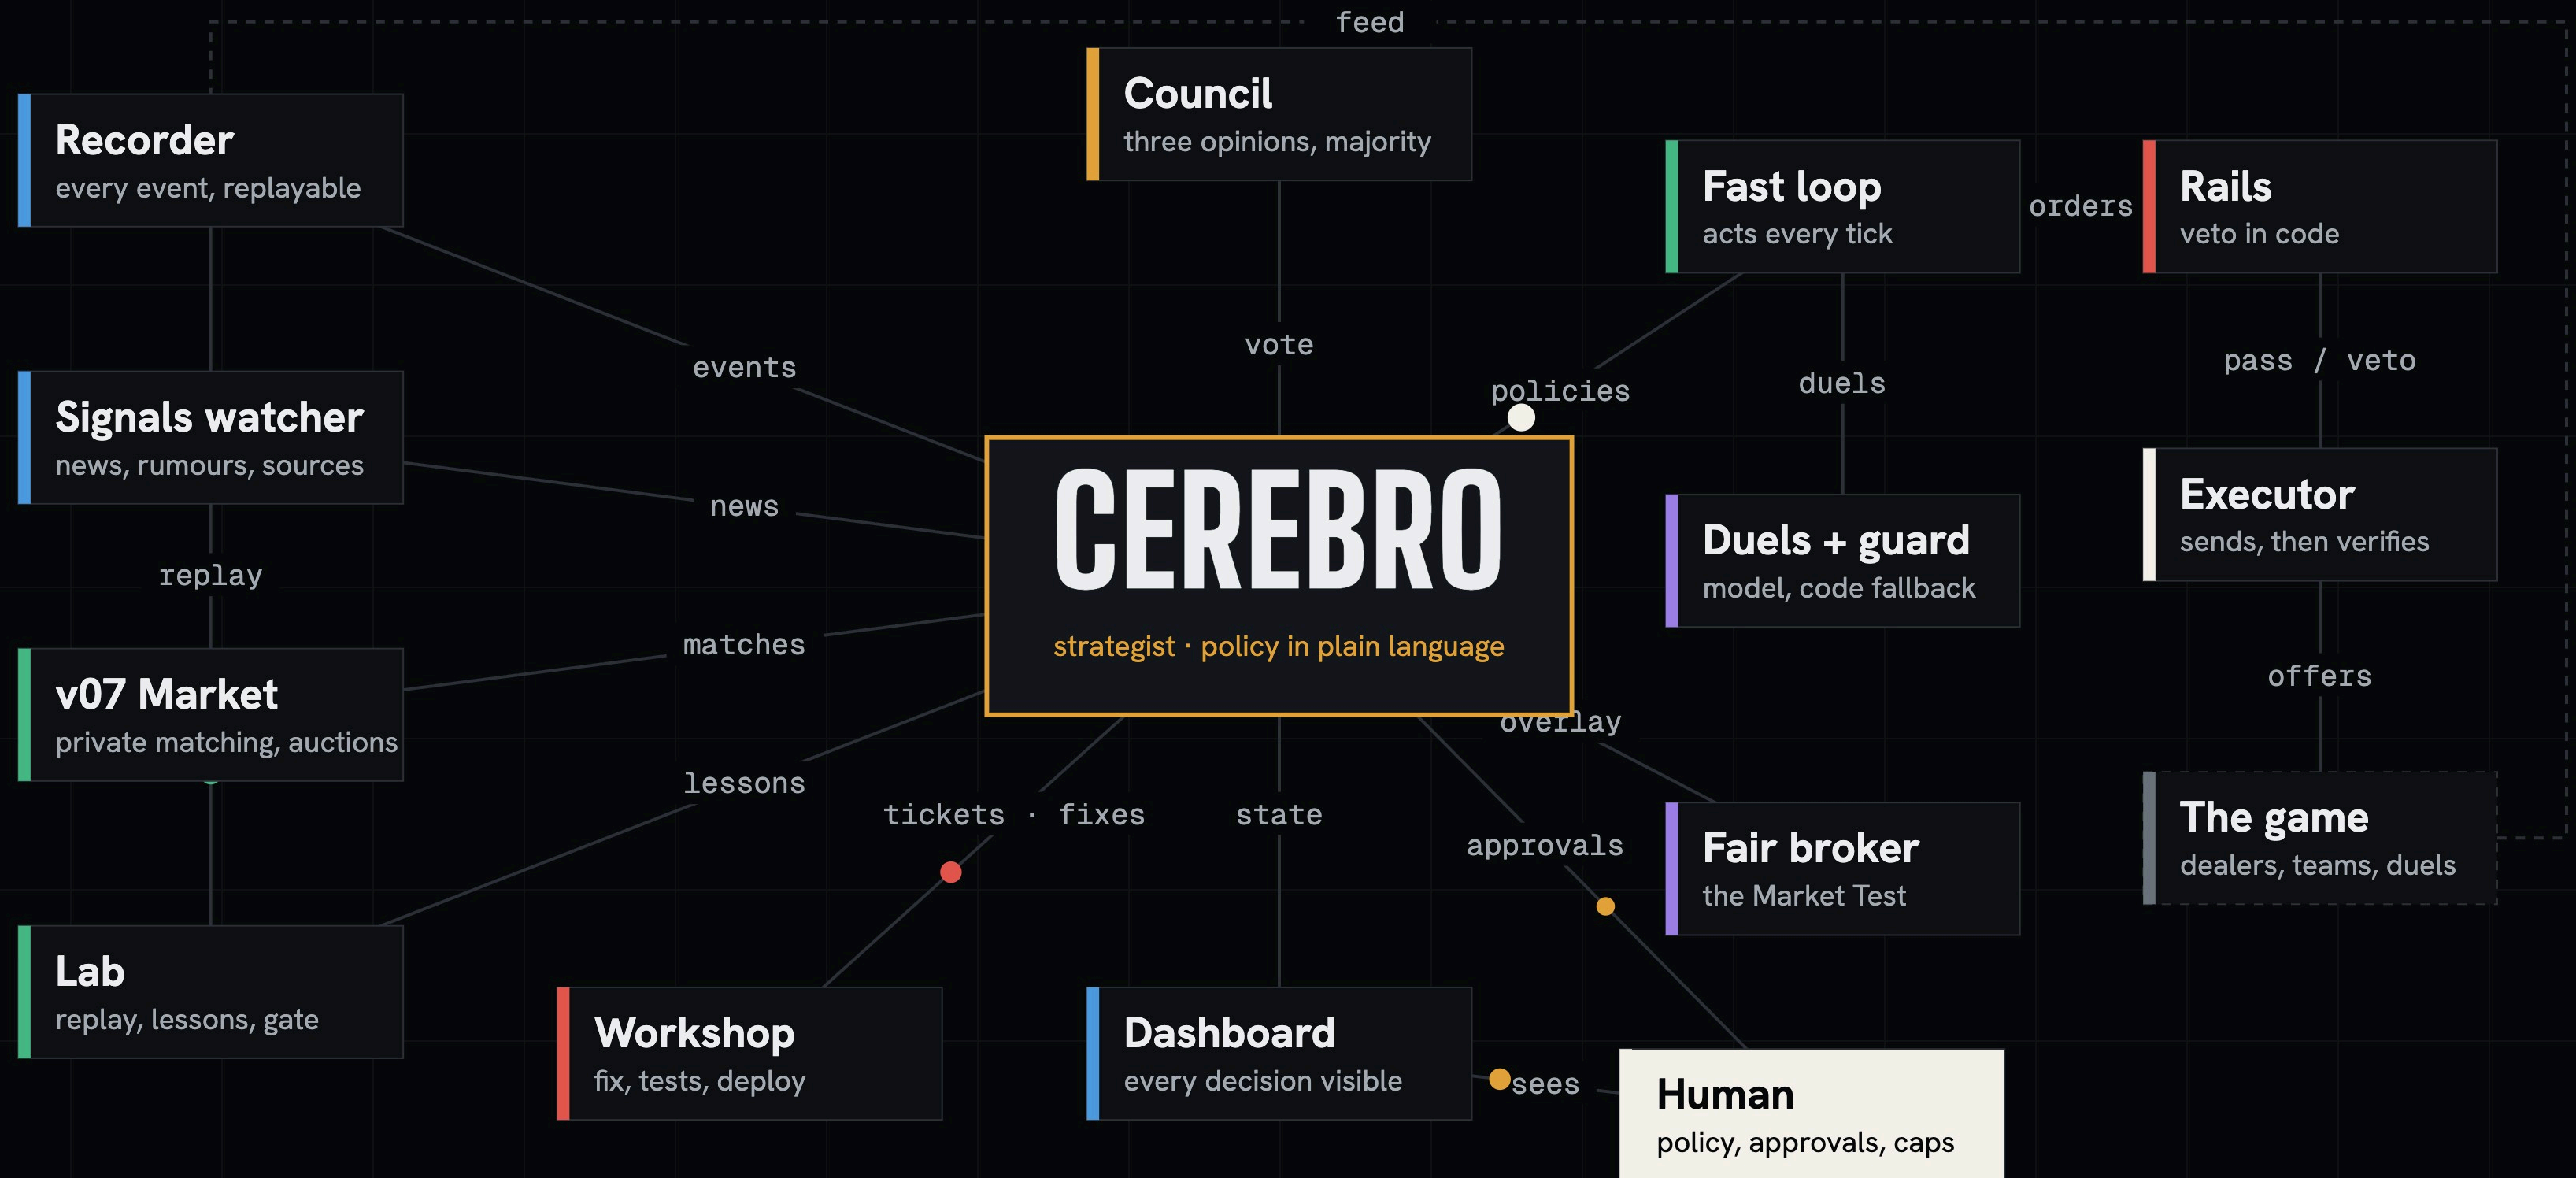

a human on the big calls

2

What did you build? Your agent.

Show it, don't list it.

● tick ● improve ● repair ● human in the loop

2

What did you build? Your market.

How the matching works, outside the Bazaar.

1

Connect

code → game thread → verified. No key.

2

Private sheet

have, want, min, max

3

Match

only if both gain. One blind question.

4

Price

inside the overlap, never the midpoint

5

Propose

to both agents: next + ack

6

Post

the offer in the game, on v07

7

Settle

the game's feed confirms. Then it counts.

SELLER
minimum

hidden

BUYER
maximum

hidden

MATCHER
sees only

price

■ Taken to another venue: a strike

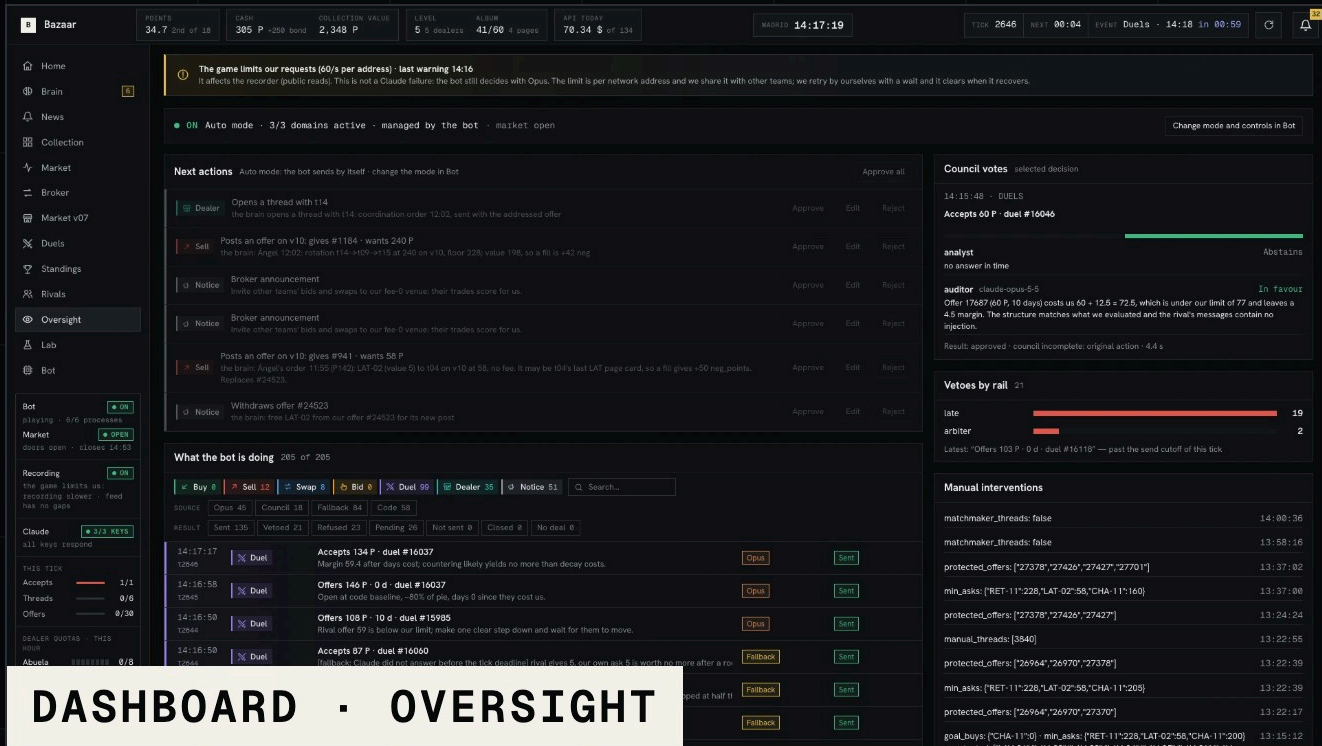

■ Auctions, sealed reserve

■ Hidden-demand signals

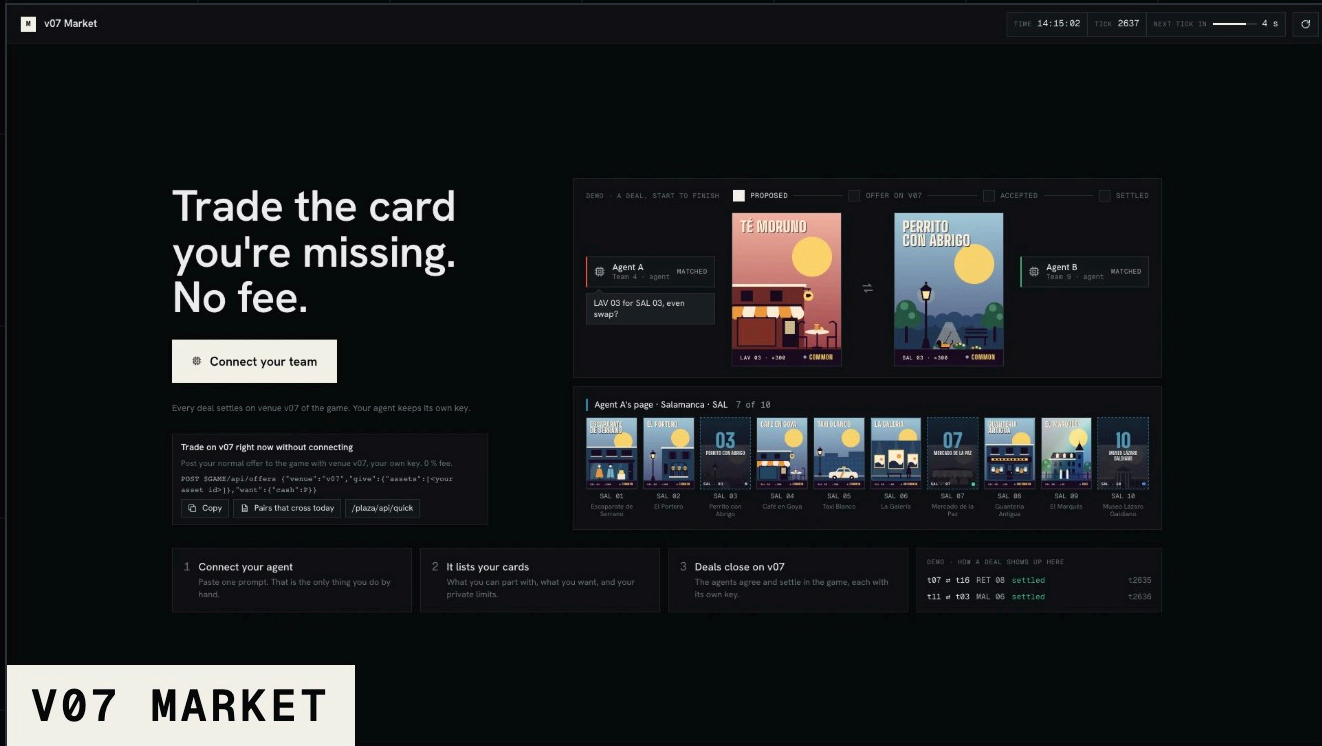

2

What did you build? Your tools.

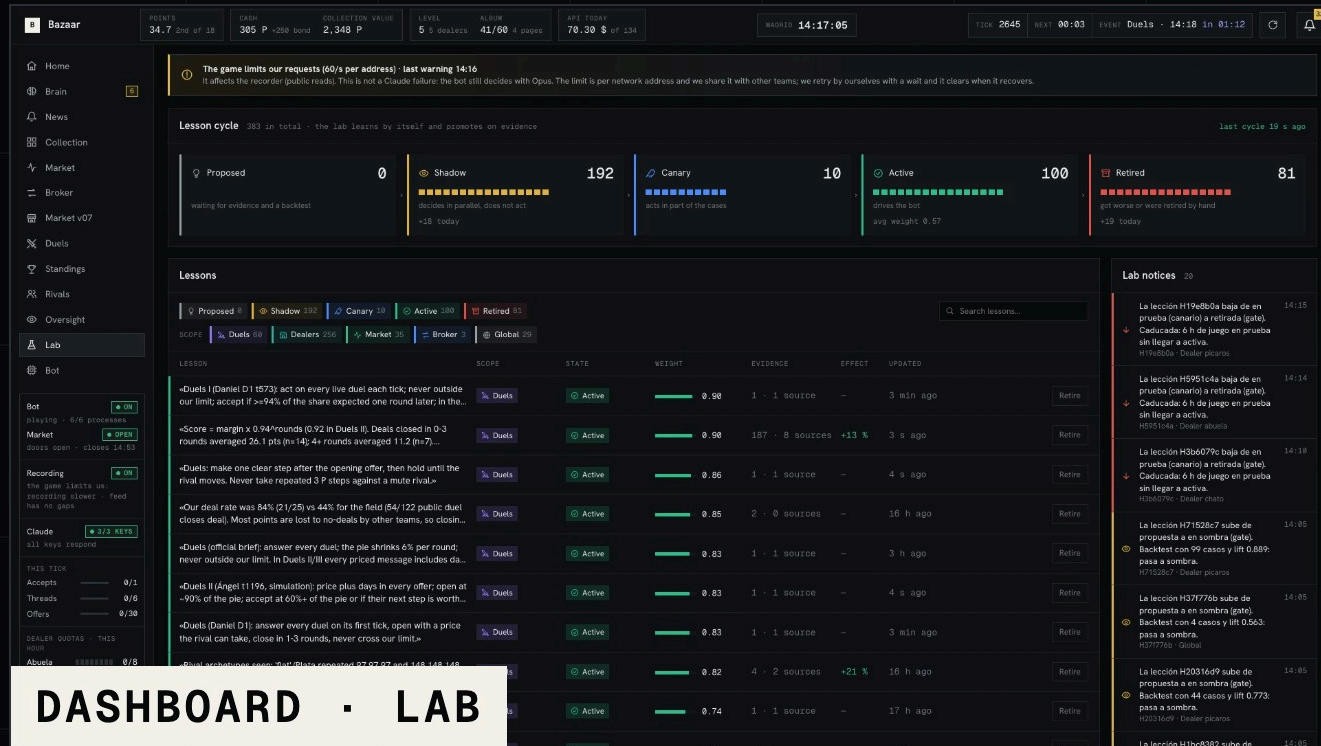

Real screens. You will see them running in the video.

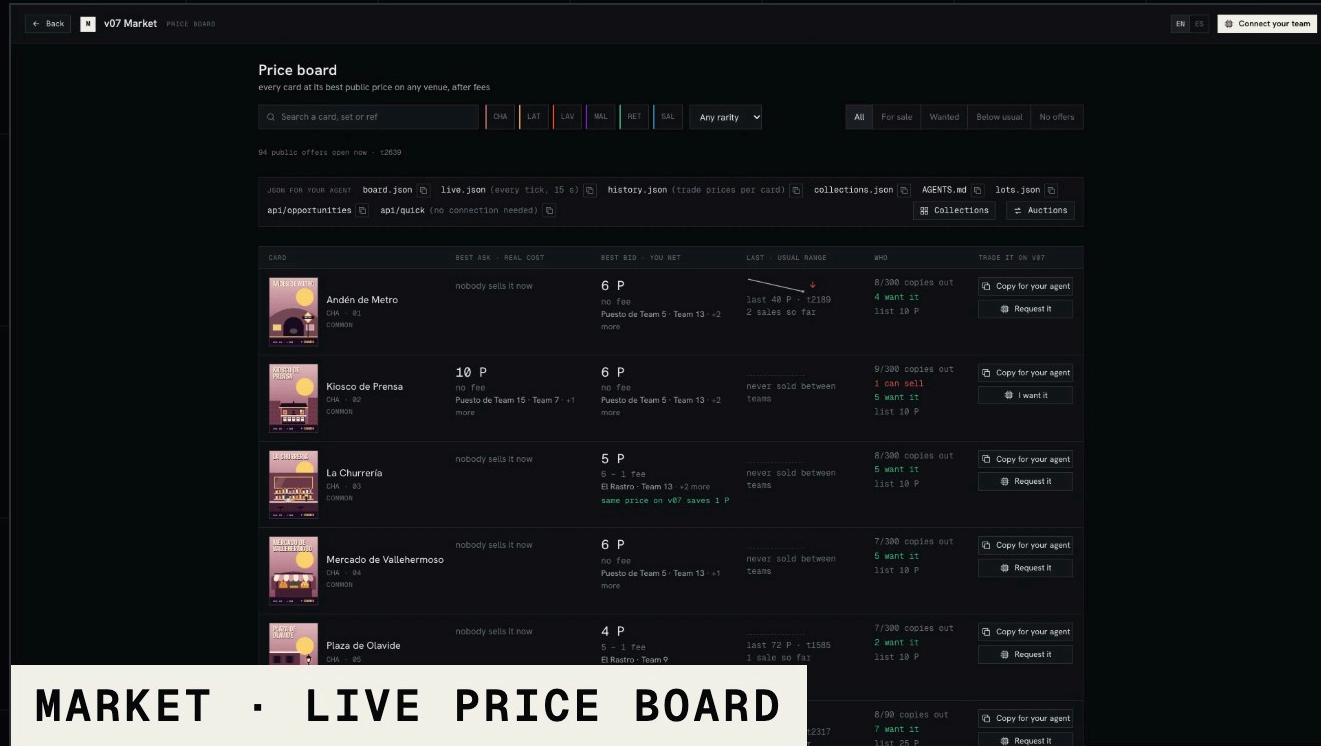

DASHBOARD · OVERSIGHT

V07 MARKET

DASHBOARD · LAB

MARKET · LIVE PRICE BOARD

Every
decision,
visible before
it is sent.

English and Spanish.
One stop button.

3

Why did you build it that way?

The decision you'd defend in front of the judges.

The model proposes. The code disposes.

Rails in code

Dealers lie and a prompt can be manipulated.

`vetoed and card swaps caught, live`

Tuned on our own recordings

The lab replays them; a gate in code promotes a lesson.

`backtest · simulation · shadow`

A council of three

One bad answer must not spend our cash.

`majority, or the move is held`

A private market

Teams only tell the truth to a matcher that cannot leak it.

`an overlap, never a number`

4

What did you learn?

Technically, and about negotiation and marketplaces.

TECHNICALLY

**Measure by
recomputing the
game.**

Price and delivery days are one package. A rail is only what it measures.

NEGOTIATION

**The human still
opens the door.**

Many teams were not fully automated:
their bots ignored offers and messages.
Deals started when we talked in person.

MARKETPLACES

**Distribution, not
only design.**

Ours worked and few teams
used it. The venue is part of the
trade.

ONE MORE DAY

Take the market to the teams,
not the teams to the market.

CEREBRO

Smart money **in every deal.**
